بسم الله الرحمن الرحيم

Web 1 - Lab
Final Project

Instructions:

- There are three templates, you have to choose one of them.
- You have to work on the project alone.
- Using libraries like Bootstrap and Tailwind is not allowed.
- The only library you can use is Font Awesome (an icon library).
- You have to use JavaScript in order to achieve some tasks like form validation.
- To view the templates, you have to download Adobe XD.
- Do not copy any code from the internet blatantly.
- Any duplicate projects will get a zero.

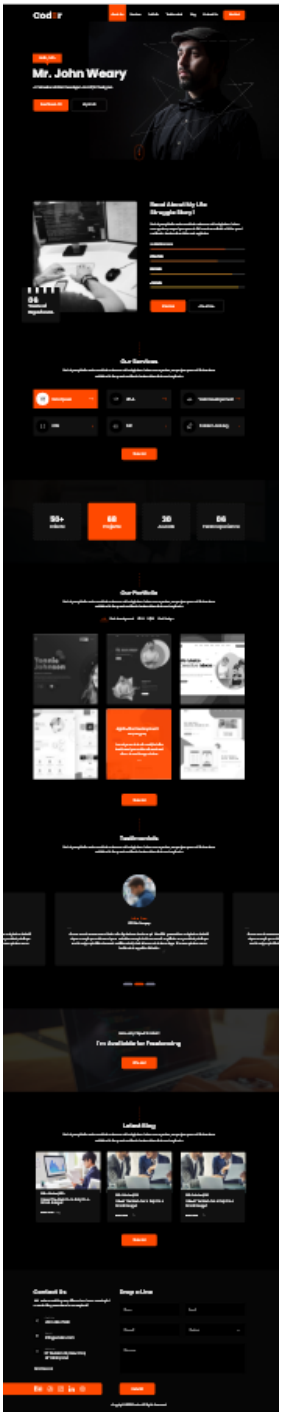

Templates:

Choose one of the following templates:

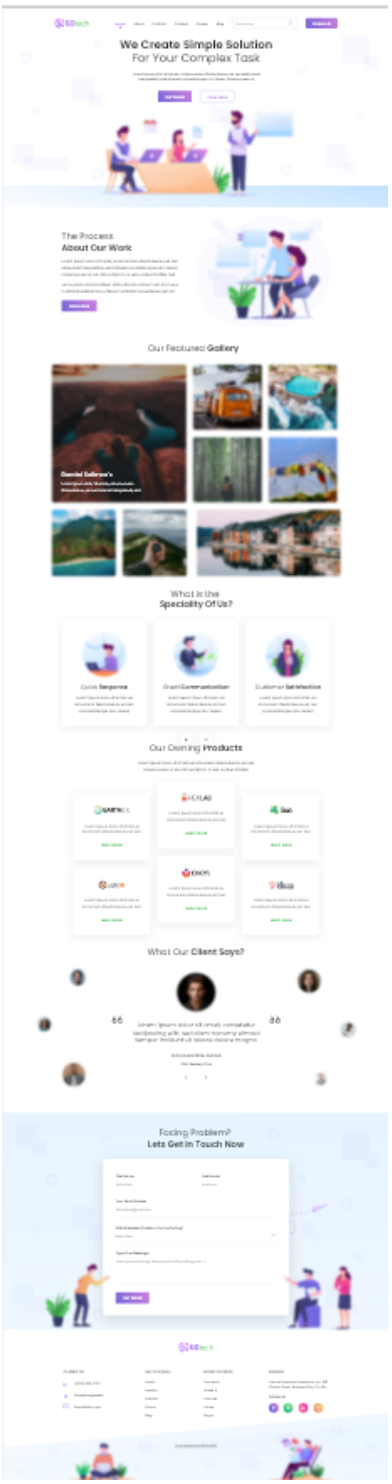

XD file download link:

https://github.com/yahiasaqer/XD-Template

XD file download link:

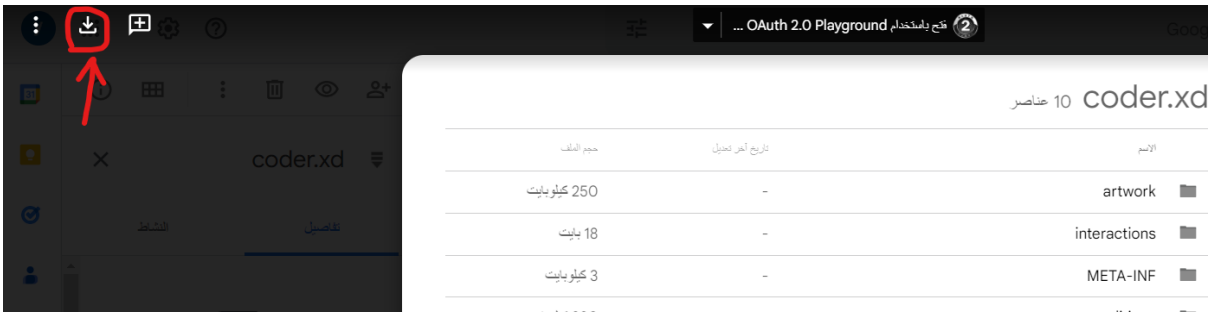

https://drive.google.com/file/d/1mHRwwUqrZcCvSylvHjycid1q3NThUAkc/view?usp=sharing

XD file download link:

https://drive.google.com/file/d/1fEyS2sYa8KYnpTLx2D7AVt1-MfdQpJx2/view?usp=sharing

Notice that you just need all files as a whole, and you do not have to download them individually since Adobe XD will deal with them as a whole.

How Grading Works:

- The final grade will be out of 100 (40%).
- Each section will be evaluated individually.
- Your code has to be clean and clear because your code will be evaluated too.
- Your JavaScript code will be evaluated individually.
- Late submissions will be treated differently, so submit your project as early as you can.

How To Get Extra Points (Bonus):

- Try implementing advanced animations.
- Try designing scroll bars and a “back to top” button.
- Try making your web page responsive.

You are also free to think of other ways to get additional points.

More details will be discussed during the lecture.

Good Luck!
